

## HOW TO INSTALL GAS BURNERS IN JOHN T. UNGER FIREBOWLS

NOTE: Always consult a licensed plumber or proper manuals before attempting gas fitting.

Step 1: Plan location of fire bowl and gas shut-off valve. Valve should be within 5 to 10 feet of pit, ideally.

Step 2: Run ½" black pipe for gas underground to location of fire bowl. Include shut-off valve at desired location.

Step 3: Place a right angle, (90 degree bend) connector right below center of fire bowl.

Step 4: Connect pipe to angle and run through drain holes in bottom of bowl.

Step 5: Thread burner onto pipe. Use pipe "dope" or pipe tape suitable for gas fittings, on all fits to insure no leaks.
